PROJECTS

- Outdoor Media Marketing**
 - An online System that lists multiple ad inventory options available in a specific geographic location, presented in a map layout. When clicking on each billboard, a popup provides information about that billboard and is shown on the specific area. This system has 3 Roles: Super Admin, Supplier, and End User.
- Campus Management System**
 - Campus management system is an integrated solution that takes care of the various activities of an educational institution like student management, administrative functions etc.
- ERP Odoo**

ERP ODOO (Open ERP) is a Suite of business applications syncing seamlessly for complete business management.
- Zaina**
 - Zaina is an online quiz website for its clients to make and generate tests online.
 - There will be two users, one who will attempt the test, and one who will make quizzes/tests and manage the website.
 - User-friendly interface for quiz creation and management.
- Invohub**
 - InvoHub is a core system designed to manage all resources and projects efficiently. The system is used to manage and evaluate the performance of the resources.
 - InvoHub enables project managers to control various aspects of their projects, including resource allocation, scheduling, and task assignments, allowing them to optimize resource usage and project performance.
- Video Editor App**
 - Video Editor App is a user-friendly app that empowers users to edit and enhance their videos effortlessly.

ROLES AND RESPONSIBILITIES

- Roles and Responsibilities**
 - Develop and execute test cases based on requirements.
 - Work closely with cross-functional teams including developers, designers, and project managers to ensure alignment on project goals and timelines.
 - Identify, document, and track defects and issues in a tracking system.
 - Participate in daily stand-ups, and sprint planning, as part of the Agile development process.
 - Designed detailed test plans for each sprint
 - Record Test progress and results.
 - Provide input and suggestions for improving software quality, processes, and test methodologies.
 - Performed regression testing to ensure software stability and reliability across multiple releases, leading to improved quality control and a significant reduction in defect rates.
 - Identify potential problems that users might encounter.
 - Conduct compatibility testing to ensure that the software works across different devices, browsers, and operating systems.
 - Participate in UAT by supporting users and stakeholders during the testing process.
